

Thank you, Mr. Speaker. and Thanks for my colleagues, Miss Calliope and Miss Jade. We believe that we should have some doubts about our existing knowledge, and our knowledge system is progressing in the collision, isn't it? Everything is possible. If you still don't believe that the earth is flat, then I wanna prove to you that the earth is at least not round.

My first argument is that the earth is not a sphere in the strict sense, it just looks like a sphere. Friends on the opposite side said that there are many pictures to prove that the earth is a sphere, but this is just a macroscopic illusion. If we zoom in, the earth is actually not a strict sphere, but an irregular sphere that is similar to a sphere.

As we known that the Polar radius of our planet is around 6356 km and its Equatorial radius is 6378km. There is a 22km difference between them. Isaac Newton first proposed that Earth was not perfectly round. Instead, he suggested it was an irregular sphere that is squashed at the poles and swollen at the equator.

Because the ocean near the equator tends to expand outward due to the earth rotates.

If we evaporate all the seawater, we will expose the seabed to us. We will find another unknown world hidden under the sea. A deep gap with an average depth of 3.8 km has many trenches formed by the movement of the earth's plates. For example, the Mariana Trench is the deepest trench on earth, it's about 11km. The highest mountain in the world, Mount Everest, has a height of 8,848 meters. The altitude difference between them reached nearly 20 km.

I believe that the above is enough to prove my point that the earth is not a sphere in the strict sense. In addition, I want to diversify my thinking a little bit, and don't be limited by the current knowledge framework.

If you are trying to prove that the earth is round with the so-called "circumnavigation", then I would like to take an example to refute this view. Mobius ring, and his three-dimension version, the Klein bottle. I will show you a little example about mobius ring. (Some presentations) This is a tape, and when we take it like this, it will become a Mobius ring. We start from this point and draw a line towards the same place. In the end, we will still reach the point where we started. Obviously, this is not a sphere!

More than that, we can have some more amazing imaginations. I don't know if you have seen a movie called Matrix. Maybe the environment around us is just like in the movie, we are just programs. The feeling of sight, hearing, smelling, touching, and so on. All our feelings are virtual, even though we feel it is extremely real. The earth is a virtual thing, and the shape of the earth is even more meaningless, because it can be anything.

Ladies and gentlemen, my colleagues gave their arguments about "the earth is a plate", and I stated from another way that "the earth is at least not round". The most important thing is not to be limited by the existing knowledge framework! Thank you!
